如何選擇適合的標的物

- 選擇具有良好流動性的標的物
- 選擇具有明確趨勢的標的物 (例如)。
- 選擇具有明確支撐/阻力的標的物。 *#*標的物 / *#*標的物
- 選擇具有明確波動性的標的物。
- 選擇具有明確趨勢的標的物。標的物具有明確趨勢。
- 選擇具有明確支撐/阻力的標的物。標的物具有明確支撐/阻力。

Algorithmic Trading & Execution

- **Algorithm:** A set of instructions that a trader uses to execute trades, often based on technical analysis (e.g., moving averages) or market conditions (e.g., volatility). Algorithms can be designed to execute trades automatically, reducing the risk of human error and improving execution speed.
- **Execution:** The process of actually buying or selling a security in the market. Execution can be done manually or through an execution algorithm. Execution algorithms are designed to execute trades in a way that minimizes market impact and maximizes execution speed.
- **Order types:** There are several different types of orders that can be placed, including market orders, limit orders, and stop orders. Each order type has its own characteristics and risks. For example, market orders are executed immediately at the best available price, but they can result in a significant price slippage. Limit orders, on the other hand, are only executed at a specific price or better, but they may not be executed at all.
