What is the difference between a stock and a stock index?

A stock represents ownership in a single company, while a stock index represents the performance of a group of stocks. For example, the S&P 500 index tracks the performance of 500 large companies listed on the New York Stock Exchange. When the index goes up, it means that, on average, the companies in the index have increased in value. Conversely, when the index goes down, it means that, on average, the companies in the index have decreased in value.

S&P Dow Jones Indices

A Division of **S&P Global**

Equity
S&P 500®

AS OF SEPTEMBER 30, 2022

Performance

INDEX LEVEL	RETURNS			ANNUALIZED RETURNS			
	1 MO	3 MOS	YTD	1 YR	3 YRS	5 YRS	10 YRS
Total Return							
7,603.14	-9.21%	-4.88%	-23.87%	-15.47%	8.16%	9.24%	11.7%
Price Return							
3,585.62	-9.34%	-5.28%	-24.77%	-16.76%	6.4%	7.31%	9.55%
Net Total Return							
6,645.87	-9.25%	-5%	-24.14%	-15.86%	7.63%	8.66%	11.05%

For example, if a stock index goes up 10%, it means that the average value of the companies in the index has increased by 10%. However, this does not mean that every company in the index has increased in value. Some companies may have increased significantly, while others may have decreased or remained flat. This is why it's important to look at the performance of individual companies as well as the index as a whole.

Call Option: What is it?

Call options are contracts that give you the right to buy a security at a certain price.

For example, if you buy a call option (e.g. 500 shares of Apple), you can buy 500 shares of Apple at the strike price of \$335 in 2022.

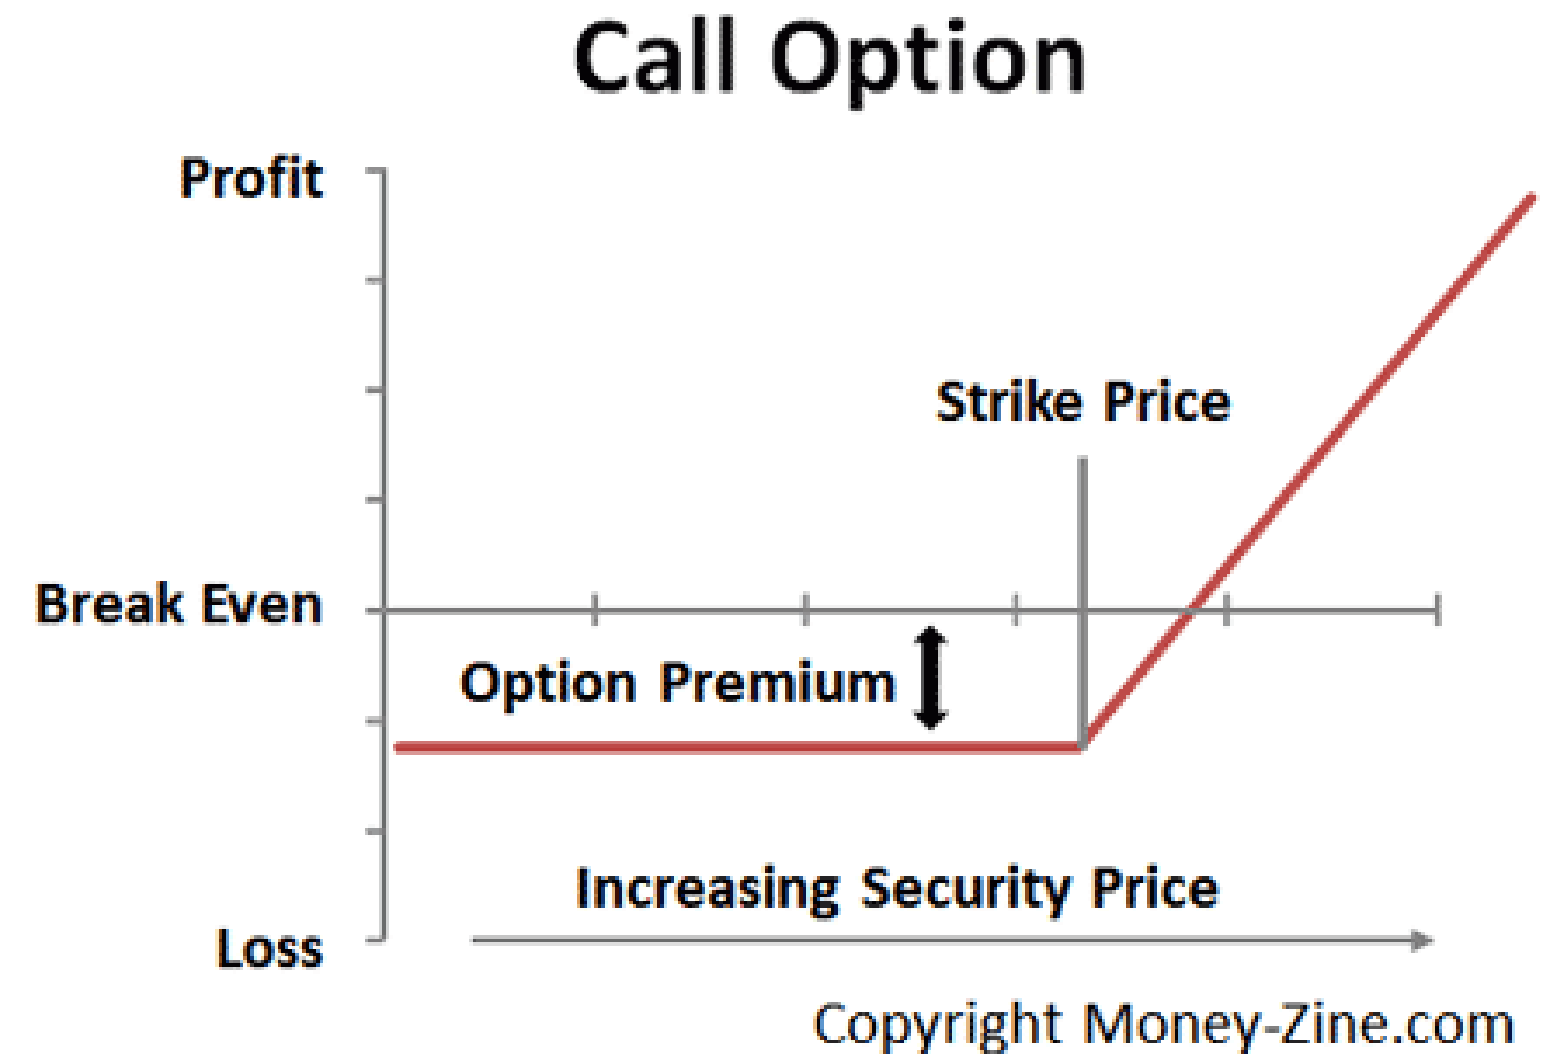

Call options are typically bought for 100 shares of the security, with a strike price of ~\$335, and a premium of \$35.

For example, if you buy a call option on 3/18/22 with a strike price of \$335 and a premium of \$35.

Call options are typically bought for 100 shares of the security, with a strike price of ~\$335, and a premium of \$35.

Call options are typically bought for 100 shares of the security, with a strike price of ~\$335, and a premium of \$35. The call option premium is the cost of the option, and the strike price is the price at which you can buy the security.

Call options are typically bought for 100 shares of the security, with a strike price of ~\$335, and a premium of \$35. The call option premium is the cost of the option, and the strike price is the price at which you can buy the security.
